

SUMMARY

Design lead and design engineer with 6 years across Web3 (Crypto), B2B SaaS, and healthcare. I built Equicomtech's design function from zero to four as its third employee. I ship the prototypes in code. 11 Superteam bounty wins.

EXPERIENCE

Design Lead

Equicomtech

Crypto trading platform. Built the design function here from zero to four. Product specifics are under NDA, so scope and process are shown here.

- Built the design function from zero to four: hired all 3 designers from roughly 1,800 applications, and grew each into self-directed work.
- Shipped the crypto trading MVP: Spot and Futures terminal with order book, charts, leverage, and PnL.
- Built AgentUX, the context layer the team designs against: shipped screens and specs served into Claude and Codex in the codebase, with a search API for people and AI agents over REST and MCP.
- Led the internal Graphics App for dev handoff. I scoped it and set up the backend with Supabase, the team shipped the UI.
- Prototype in code. Trade Lab and an order simulator test flows before they reach production.

Jul 2025 - Present · Bangalore, India

UX Design Engineer, Contract

Pubkey

Solana ecosystem tooling, open source.

- Rebuilt the open source Discord verification UI on Solana in a 1 month sprint. Covered Users, NFTs, Communities, and Solana roles.

2024 · Remote

UX Designer

Entytle

B2B SaaS for installed base management. Think Salesforce for industrial equipment.

- Sole designer for two years across four solutions, desktop and mobile. Retention up 7 percent.
- Health Check: inspections scheduled against an equipment serial, filled in on a phone in the field.

2022 - 2024 · Remote, US based

UI/UX Designer

Detrix, then Synclo

Detrix Networks, pivot to Synclo and merged.

- Phase 1: chain agnostic layer tech. Built a cross chain wallet and an NFT platform.
- Phase 2: pivot to healthcare as Synclo. Built QMS for predictive diagnosis, and streamlined check in.

2020 - 2022 · Hyderabad, India

Experiments & Exposure

Independent

Social media and digital experiments. Content, tools, workflows, and open source.

- 11 Superteam Earn wins, 2,630 USD total. Deriverse placed 2nd, 200 USDC.
- OME-sim: order matching engine in Rust covering limit, market, stop, TP/SL, and liquidation.

2019 - Present · Remote

PROJECTS

- AgentUX: the context layer my team designs against. Shipped product screens and specs served into Claude and Codex in the codebase, searchable by people and AI agents.
- Deriverse: trading analytics dashboard for a Solana DEX. 2nd place in a Superteam bounty, 200 USDC.
- OME-sim: order matching engine in Rust covering limit, market, stop, TP/SL, and liquidation.
- DeFi Triangle: crypto design system lab covering foundations, components, and motion.

SKILLS

Trading and fintech	Order book, matching engine, order types (limit, market, stop, TP/SL), leverage and liquidation, charts and market data, Spot and Futures terminals, fiat on and off ramp, KYC, PnL, portfolio and risk states
Design	Design systems, prototyping, user research, competitor research, insights from data, accessibility, Figma
Frontend	React, Next.js, TypeScript, Tailwind CSS, HTML and CSS, Rust (basics)
Web3	Solana, DeFi interfaces, dApp design, blockchain tooling
AI	Claude, Cursor, MCP, AI assisted research, prompt engineering
Leadership	Building a design function, hiring at volume, coaching reports, design ops, design reviews, PRD ownership, dev handoff
Backend and infra	Supabase, Cloudflare, Vercel, system design (learning)

EDUCATION, CERTIFICATIONS, AND RECOGNITION

- B.Tech, Vignan University. Dropped out in 2019. Google UX Design Certificate, Google. Enterprise Design Thinking Practitioner, IBM.
- Superteam India: Contributor. 11 bounty wins, 2,630 USD, [superteam.fun/earn/t/yamparalarahul](#).
- IslandDAO: Member.
- Greed Academy: Graduate.
